

RECYCFLUO – PRODUCT LIST COVERED BY PHASE II –

The following table lists “recycling fee” rates for Phase II of the RecycFluo program. Since October 1st, 2013, ecofees apply to mercury-containing lamps incorporated into all types of fixtures or automobiles on a per unit basis. Affected lighting fixtures are defined as electrical/electronic lighting products with a primary purpose of illuminating a space that contains one or more replaceable mercury-containing lamps, including hard-wired, freestanding and portable products.

As of October 1, 2013, members are required to report the ecofees for each mercury lamp sold as a component in a fixture or automobile:

Examples

A/ A member selling a street lighting fixture containing one HID lamp will be required to report and remit one HID fee to the program on the sale of that fixture.

B / A member selling an automobile with two integrated HID headlamps would pay two HID fees on the sale of that automobile.

The fee rates for component mercury-containing lamps are the same as the fee rates applied to replaceable mercury containing lamps sold individually. Mercury-containing lamps that are integrated into luminaries/automobiles and replacement mercury-containing lamps sold individually must be reported jointly, without distinction.

Example :

If a member sold, during the same reporting period, 300 HID lamps as replaceable/individual lamps and 100 fixtures with a single, integrated HID lamp within each, the member would report 400 HID lamps for that reporting period.

Below is a non-exhaustive list of examples of luminaires that can be sold with mercury lamps. It is the responsibility of each member to review their fixtures and report sales of mercury-containing lamps incorporated into their fixtures, not just those listed as examples.

If members identify any additional lighting fixture type sold with an integrated mercury-containing lamp, which has not been included in this list, we ask that they contact RecycFluo so it can be added to the example product list.

For more information about the Program, or to notify the program of additional products not yet listed, please contact RecycFluo at info@recycfluo.ca.
